

WORLD MIGRATORY BIRD DAY

Migrating birds know where to travel and how to find their back home.

They use the stars, sun, landmarks, and the earth's magnetism to help them navigate.

Connect the dots

Lights out!

Migratory birds are threatened by light pollution! Artificial light at nighttime (*the lights in our homes, buildings, and businesses*) can confuse birds on their journey. Light pollution also causes window collisions.

Help save the birds by dimming or turning off your lights, and applying decals to your windows.
