

# WORLD ENVIRONMENT DAY 2022

## ONLY ONE EARTH

### One of a kind

By studying our planet's rocks, scientists have determined the Earth is around 4.5 billion years old! It's been around a long time!

Earth is the only planet in our solar system that can support life. It has two very important things that living creatures need to survive — lots of oxygen and lots of water!

Earth is protected by a blanket of oxygen and nitrogen! It keeps the temperature comfortable and shields us from the Sun's strong rays.

Climate change is affecting the Earth's temperature and weather patterns, causing droughts, floods, extreme storms, and melting ice caps! It is a threat to the health and survival of all living creatures.

you can't spell earth without heart

### Try this!

What are some ways you can help protect the Earth? Share your ideas

Describe what the Earth means to you and how it makes you feel. Think of words that begin with these letters:
