# How 2 Form an Eyelet

Round/Concave bending pliers
(Wubbers for example)
Jewelry wire

**Step 1**
Insert the wire in between the round and concave jaws of the pliers, resting the end against the inner jaw.

**Step 2**
Squeeze the jaws closed to start the U-bend in the wire.

**Step 3**
Use your fingers to hold and guide the wire as you bend.

**Step 4**
Rotate the pliers to bend the wire back on itself to make a complete loop.

**Step 5**
When the loop is closed, rotate the pliers back slightly allowing the concave jaw to bend the excess wire away from the loop,

**Step 6**
You now have an eyelet end. Just cut the excess wire to a desired length.
