

WHY YOU WILL LOVE OUR DOUBLE LAYER SLING

SLING FURNITURE: *Featured on all Homecrest sling collections.*

The Homecrest-pioneered sling is constructed of double layers for unmatched comfort and support. Our durable outdoor sling is available in a variety of outdoor fabrics and is easily replaced. Minimal maintenance and comfortable design continues to make the Homecrest sling a #1 choice from coast to coast. When selecting a Homecrest sling seating option (except for Allure), you will need to select a welt or binding color. Welting will match the frame finish unless an alternate is selected. Slings utilize the same fabric on the front and back for an attractive look.

SLING CONSTRUCTION

The Homecrest double layer sling uses internal support rails to shape and stretch the sling. This allows for the sling to ergonomically conform to the body and eliminates a rigid surface. Homecrest's double layer sling creates an individual comfort experience.

SERGING

After the first sew line is in place, slings go through a five-thread serging process that doubles the strength of the seam.

WELTING

Sling construction is finished with a sewn-on welt. Welting is attached with a third sew line to combine the multiple layers of fabric. Welting color will default to the frame finish color unless an alternate welt color is selected.

SLING TESTING

Homecrest slings are static-load tested to ensure durability of seam strength, by dropping a 125 lb weight on a sling chair for 50,000 cycles.
