

# ***Painless Tattoo Cream Directions***

In order to ensure maximum numbing, please DON'T DRINK ANY FORM OF ALCOHOL within 24 hours of Tattooing, or the numbing may not be as effective or long lasting.

Please spot test the day prior to use on a small area that'll be tattooed the next day, especially if you have sensitive skin to ensure that your skin doesn't become inflamed. Some minor localized redness is normal.

## ***Steps For Use:***

- 1 - Wash and exfoliate the area to be tattooed, lasered or pierced quite thoroughly with soap, water and exfoliator to remove dirt and dead skin this will help the cream penetrate. Dry area completely.
- 2 - Apply a thick amount of numbing cream (2mm thick) to the area and rub in thoroughly.
- 3 - Cover with cling film. The heat under the plastic wrap helps activate the cream and keeps the cream from drying out.
- 4 - Leave cream and wrap in place for 45 minutes before procedure.
- 5 - After 45 minutes, remove the cling film, wipe the cream away with paper towel and wash thoroughly once more with antibacterial soap. Pat dry and ensure treated area is completely dry. You're now ready for your pain free tattoo!

---

For long procedures lasting hours over large areas; it is recommended to apply [Painless Tattoo Cream](#) prior to starting for a completely Pain-free tattoo session. IE; apply Painless Tattoo Cream before starting. As Painless Tattoo Cream begins to wear off, apply [Painless Tattoo Spray](#) to any areas already worked on for immediate relief throughout the rest of the session.

---

Skin typically remains numb for 3-4 hours once cream is removed depending on your skin type and location on the body.

We caution against re-application to broken skin. We recommend using [Painless Tattoo Spray](#) on broken skin, as needed, for the remaining duration of the tattoo session that outlasts the cream.

Follow standard tattoo sanitation practices when applying.

The expiration date is indicated at the bottom of the tube, which is usually 3 years after the manufacturing date.

Store Painless Tattoo Cream in a cool area away from heat and moisture. Painless Tattoo can be re-used so long as the opened tube has been tightly closed. We recommend use within 5-10 days of opening. Discard if the cream is discolored.

We encourage everyone to inform & consult with their Tattoo Artist on the use of Painless Tattoo ahead of your session.

Disclaimer: Painless Tattoo Co. assumes no responsibility for allergic reactions or adverse effects of any kind, please read the ingredients and instructions for use carefully before use and ask any questions you may have. If you have ever had any skin problems or allergic reactions or you're in doubt at all, then consult a GP before use.
