FLIGHT NUMBERS EXPLAINED IN DETAIL

Speed ratings are listed from 1 to 15. Discs with a higher speed cut through the air better.

Glide range from 1 to 7. A disc with more glide is able to better maintain loft during flight.

High speed turn is between -5 and 1. A disc with low turn has a tendency to turn right when thrown backhand-ed by a right-handed player.

Low speed fade is listed from 0 to 6. A disc with high fade will tail off left at the end of the flight when thrown backhanded by a right handed player.

Our most popular premium plastic. Translucent. Excellent durability paired with good grip. Availability: All molds except some putters.	Solid colored discs. Mixed with a different polymer for even better grip than the Opto plastic. Availability: Selected molds.	Zero is our putter plastic made for the perfect grip and feel. Made in three different stiffness levels. Availability: All putters.	Zero is our putter plastic made for the perfect grip and feel. Made in three different stiffness levels. Availability: All putters.	Zero is our putter plastic made for the perfect grip and feel. Made in three different stiffness levels. Availability: All putters.	Good grip and feel, even when weather compromises your grip. Retro is our most affordable plastic. Availability: Selected molds.	Moonshine is made from the same durable plastic as Opto, plus an additive that glows in the dark. Availability: Selected molds.	Opto plastic with micro-bubbles to achieve lighter weight discs. Great for those with less arm speed. Availability: Selected molds.	Reused material from discs that did not make our quality control. Good grip and easy to wear in. Availability: Selected molds.	Opto-X is a premium plastic blend providing a stiffer feel, and most often more over-stable flights. Availability: Team Series discs + some limited runs.
