

FUTURE HARVEST NUTRIENTS

Product Data Sheet

ROYAL GOLD Fulvic Acid

DILUTION RATE:

Use 2 ml per litre or 2 cc per quart as an addition to your nutrient solution.

Use 2 ml per litre or 2 cc per quart as a foliar spray.

GUARANTEED ANALYSIS:

0.06% Fulvic Acid

Available Phosphate (P₂O₅) 1%

Derived from:

Monopotassium Phosphate, Phosphoric Acid.

GROWTH STAGE:

Rooting
Vegetative
Flowering

FOR USE IN:

Soil
Coco
Hydroponics

FREQUENCY:

Every feeding

The full benefits of Fulvic Acid are too numerous to list, but simply put, this interesting plant additive increases nutrient uptake in plants. Fulvic Acid changes fertilizer salts on a molecular level and makes them more bioavailable to the plant, a kind of digestion aid.

Amongst Fulvic Acid's many other benefits are: the elimination of waste from the plant, almost like a detox, making the product taste better, it helps in drought or under watering situations, and increases resilience to stressful temperature fluctuations - both of which are common problems with indoor crops. Research suggests that under watered plants recover quicker with applied Royal Gold because of increased enzyme and antioxidant activity, and the plants also cope with a lack of water better.

It also became evident the growth and quality of normally well watered plants improves when Fulvic Acid is used all the way through the plants cycle.

KEY FEATURES

- Fulvic Acid increases nutrient uptake meaning growers retain optimal levels of expensive P-K additives with better results.
- Excellent value because of low dilution rate, only 2ml per liter.
- Can be used on all crops and in any medium, system, or situation.
- Use as a nutrient add-on or as a foliar application for instant results.

SIZE	HEIGHT X WIDTH		WEIGHT
500 mL	7.5 in	x 2.5 in	1.1 lbs
1 L	9.0 in	x 3.0 in	2.2 lbs
4 L	12.5 in	x 6.3 in	8.8 lbs
10 L	14.5 in	x 8.5 in	22.0 lbs
20 L	16.0 in	x 10.0 in	47.6 lbs
208 L	35.0 in	x 23.0 in	458.6 lbs
1000 L	46.0 in	x 40.0 in	2204.6 lbs
